

## **Frequently Asked Questions: Framed Shower Doors & Enclosures**

### **Why should I choose a Framed Shower Enclosure?**

Our standard framed doors are of the highest quality. Our doors carry a 5 year limited warranty. These doors can be more affordable than our custom designed doors, but the price differential is attributable to volume manufacturing not quality differences.

### **What thickness of glass is used?**

4mm – 8mm or 3/16"- 5/16"glass.

### **What type of glass is used?**

Tempered Safety Glass.

### **Are there different colors or patterns of glass used?**

Clear glass is most commonly used. Obscure patterned glass is available on selected models too.

### **Can the doors be installed to swing inwards into the shower?**

No! Safety standards require all doors to open outwards. If a person collapses inside the enclosure, it could be difficult to open the door in an emergency.

### **How long does it take to get product for supply only?**

Most standard doors and tub enclosures are stock items available within 5 working days.

### **Are these doors difficult to install?**

Shower doors require drilling into tile or marble, ability to use a level, talent to apply silicone sealant in a professional manner. If you are handy with tools, you should be able to install yourself – if not, hire a professional!
